# WEBHOOK - DJANGO

The name of this project is "webhook_project." After that, I will create three Django apps:

1. accounts
2. destination
3. data_handler

1. ACCOUNT MODULE WITH CRUD

FOR ACCOUNT URL IS http://127.0.0.1:8000/api/accounts/

METHOD: GET
TO RETRIEVE ALL ACCOUNTS FROM THE DATABASE.

METHOD: POST

METHOD DELETED:

2. DESTINATION MODULE

FOR DESTINATION URL IS http://127.0.0.1:8000/api/destination/
METHOD: POST
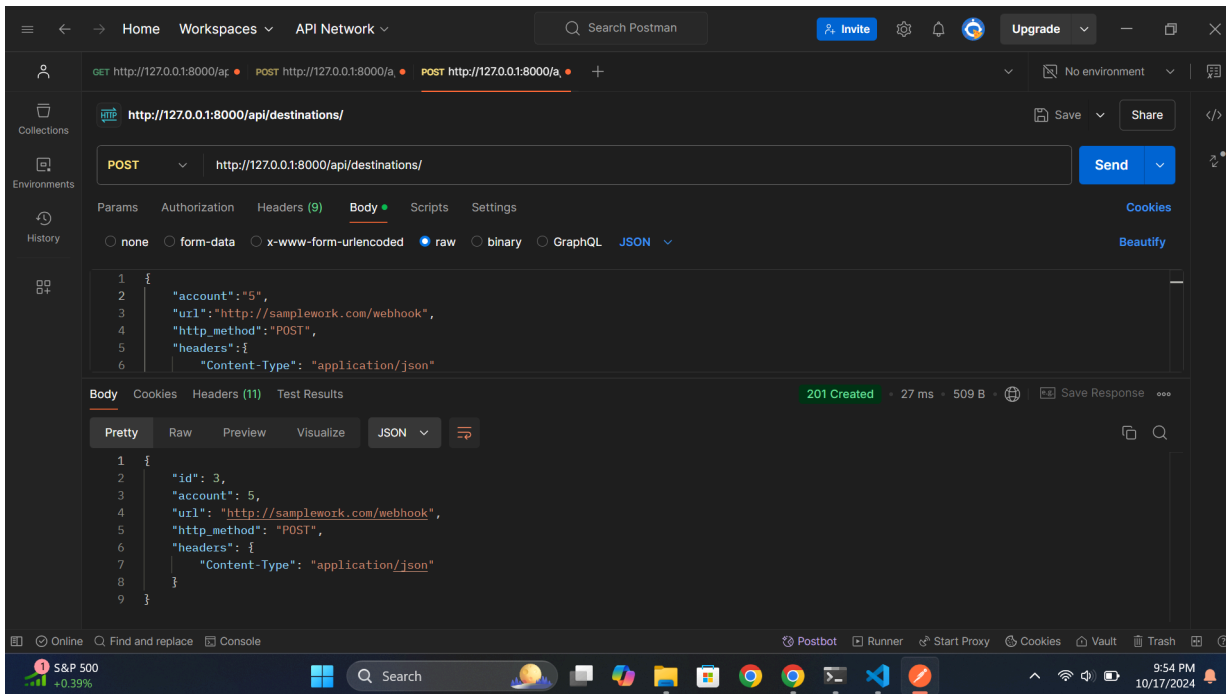

3. DATA HANDLER

FOR DATA HANDLER URL IS http://127.0.0.1:8000/server/incoming_data/
HEADER:
VERIFY WITH CL-X-TOKEN

BODY:

ONCE CL-X-TOKEN IS VERIFIED, THE DATA WILL BE SENT TO ALL THE DESTINATIONS THAT THE ACCOUNT HAS.

IF THE ACCOUNT IS DELETED, THE RESPECTIVE DESTINATIONS SHOULD ALSO BE DELETED.

AFTER DELETING ACCOUNTS 4 AND 5, WHEN VISITING THE DESTINATION PATH, THERE SHOULD BE NO DESTINATION. THAT DESTINATION IS ALSO DELETED WHEN THE ACCOUNT IS DELETED.
